

Together with NTA, SUBISU laid underground optical fiber along with overhead networking through self-supporting aerial optical fiber cable and ADSS OFC connecting 4 districts of Province 2: Bara, Parsa, Rautahat and Sarlahi. Internet service is provided to municipalities, rural municipalities, wards under municipality, public higher secondary schools, health posts/ centers. Second phase of the project included internet to locals and businesses.

NTA P2 Project, Package 1: Bara, Parsa, Rautahat, Sarlahi

In Province 2, the project further laid underground optical fibers along with overhead networking through self-supporting aerial optical fiber cable and ADSS OFC in the remaining 4 districts of Mahottari, Dhanusa, Siraha & Saptari. Internet service has been catered to municipalities, rural municipalities, wards under municipalities/ rural municipalities, public higher secondary schools, health centers and later to locals and businesses.

This project connected 5 different districts Chitwan, Nawalpur, Parasi, Rupandehi, and Kapilvastu with internet service provided by SUBISU. Underground optical fiber along with overhead networking through self-supporting aerial optical fiber cable and ADSS OFC made internet accessible to all municipalities, rural municipalities, corresponding wards, public higher secondary schools, health posts/centers, locals, businesses and even remote areas which previously didn't have access to the internet.

Initiated from Province 2, SUBISU combined underground optical fiber and microwave frequency towers to provide internet access that extends to the himalayan region of Everest Base Camp. Connecting areas like Udaypur, Diktel, Okhaldhunga, Solu base camp and EBC, tourists and locals now can use the internet and stay connected.

Everest Base Camp: Udaypur, Diktel, Okhaldhunga, Solu Base Camp, Everest Base Camp

Not just the business aspect but the projects have touched the religious sentiments too. The project connected spots like Pathibhara, Halesi, Baraha Chhetra, Janaki Temple, Gadhimai and more, with a free WiFi zone helping devotees give a tour to parents and elderlies who could not make the difficult journey, over a video call.

The project expansion started from Damak and reached Mahadev Dadha, Ilam, Phidim and Parthibhara. The expansion included the wireless network via microwave tower and overhead networking through self-supporting aerial optical fiber cable. This has increased the remote access for business and area development.

llam to Taplejung Expansion

Use of technology like Microwave Frequency Tower has facilitated in providing access to unreachable areas, while Satellite System enables internet service without interference by mountains or other barriers including backup during damage incurred by thunder storms. The microwave towers and Satellites Systems combined together provide uninterrupted services for better internet access to individual, businesses and government.
